

## **Item 10\_8c i : Drainage in Church Lane**

### **Latest update from Network Rail re drainage at Etchingam Station & Church Lane.**

“We have maintained the ditches in the station area and going back along the Industrial estate on the up side.

In addition, we completed checks on the culvert up stream that was of concern with no obvious faults found.

Unfortunately, I am still fighting to get a ditch reinstated behind the houses which I believe probably disappeared just after the BR days.

As you are aware the business is having some financial challenges and im struggling to get funding for this particular works.

Let’s see how we go and monitor with the works carried out and if there are any concerns with water levels call me and I will go straight to site.

Obviously, I don’t want any issues but seeing the drainage system under load is sometimes the best way to pinpoint the exact location of any problem.”
